ABOUT EXTENTRIX	11

Introduction

Extentrix Toolbar for Citrix is an easy-to-use tool that allows SAP portal users to take the power of Citrix Presentation Server application virtualization and application streaming with them anywhere on the SAP portal.

When you install Extentrix Toolbar for Citrix, you are adding a new function to your SAP portal. You can launch any application published on your Citrix presentation Server at any time in just one click from any SAP portal page.

Extentrix Toolbar for Citrix Acts as a shortcut for your published application, where you can find your needed applications in just a look to the toolbar and get it launched in just one click. Now your applications are on demand with Extentrix Toolbar for Citrix.

Extentrix Toolbar for Citrix with its Slick design represents an effective and intuitive navigation system, so the users will be able to find the application they require with minimum effort.

In addition, it allows users to save their Citrix Presentation Server credentials after first successful login, so no need to login. The access toolbar will get your saved credentials and pass them to the presentation server.

Overview

- 1- **Extentrix Toolbar for Citrix** [Extentrix Toolbar for Citrix](#) : this text is a hyper link that directs you to Extentrix web site.
- 2- **Previous Arrow Button**  : clicking this button shows you one application behind if the published applications are more than the number of items' maximum number, which the administrator defined in the iView properties. For more information see the administrator's guide.
- 3- **Next Arrow Button**  : clicking this button shows you one application ahead if the published applications are more than the number of items' maximum number, which the administrator defined in the iView properties. For more information see the administrator's guide.
- 4- **List of Icons**: each icon corresponds to defined published application, clicking any of them will launch that corresponded application.
- 5- **Up Button**  : appears if you are inside a folder. Clicking it will take you back to the main folders.
- 6- **Hide/Show Button**  : it is used if the user wants to hide unwanted applications. When you click this button, the toolbar will show you a check box inside each application.

To hide any application just check the corresponding check box, and to show any application uncheck the corresponding check box.

Clicking the Hide/Show button again returns the main toolbar.

- 7- **Logout**  : if you want to access Citrix Presentation Server in different credentials, you can logout by clicking logout button. The login form will be shown with your current credentials. Then you can insert the new credentials that you want to login with it.

8- Refresh Button : by default the application connects to the web services once at the load time and caches the list of published applications. Then the application uses the cached list. To force the application to connect to the web services and get the published application list again click the Refresh button.

9- Online Support Button : clicking this button will open Extentrix Online Support page.

10- On Line Help Button : clicking this button will open Extentrix Online Help page for Extentrix Toolbar for Citrix.

Note: A tool tip will appear on mouse hover over an icon showing its name.

Login to Extentrix Toolbar for Citrix

Extentrix Toolbar for Citrix supports two types of login modes: SSO and Pass-through.

Single Sign On (SSO): Extentrix implements SSO (User Mapping) in Extentrix Toolbar for Citrix. The toolbar will look for the user mapping credentials saved in the system alias that is provided to the iView of the toolbar.

If there is no saved credentials or if the credentials are invalid you will be requested to insert your credentials in a form to login.

After successful login to the toolbar system your credentials will be saved at the system alias user mapping.

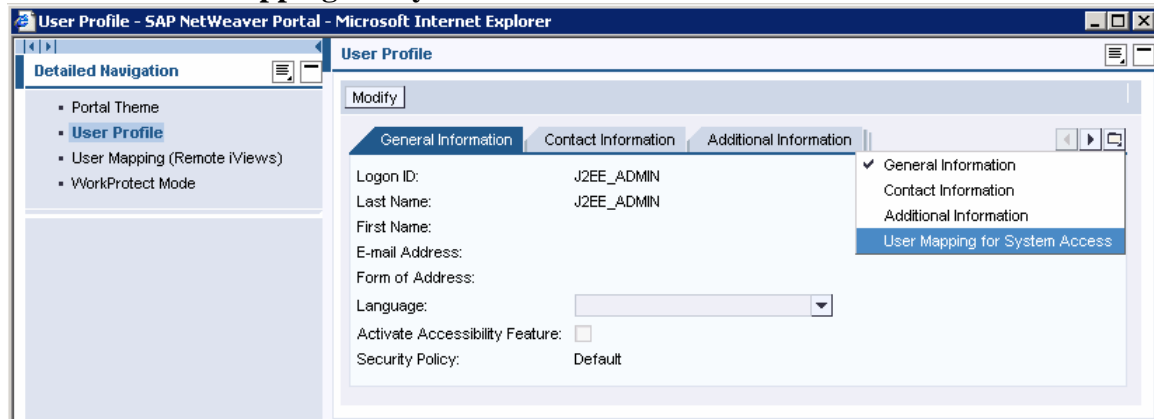

Next time you will not be requested to insert your credentials; the toolbar will read the credentials from the mapped credentials.

Pass-Through: Extentrix Toolbar for Citrix iView leverages the credentials that are used for the SAP portal authenticate. If the authentication fails, the iView will look for the credentials following the same process which is depicted above in the SSO. If the authentication fails again, the user will be required to enter credentials manually in a login form.

SSO settings

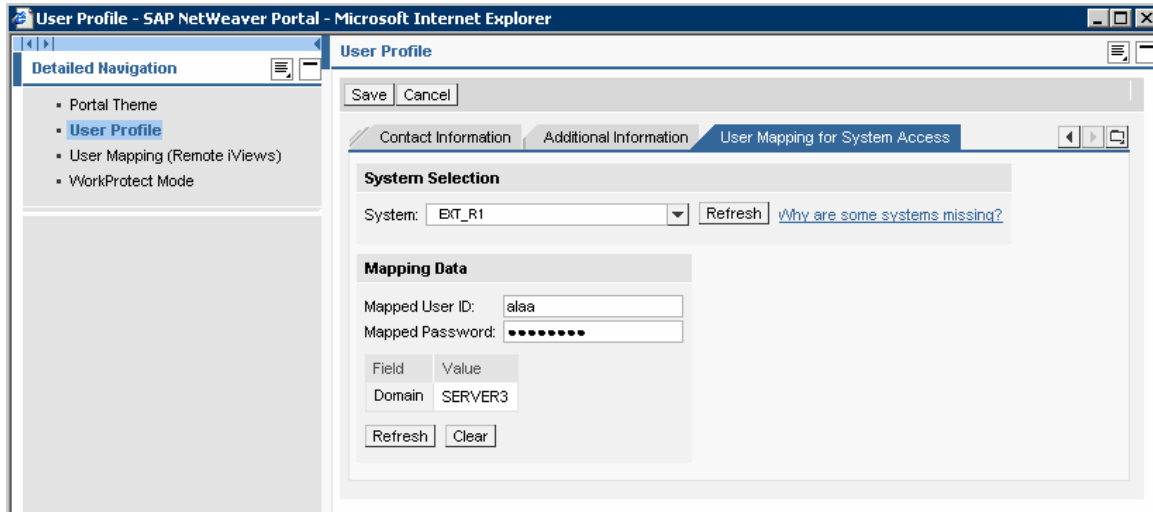

To save your credentials in the User Mapping for System Access so that you will not be requested to insert your credentials in a login form, you need to insert your credentials in the Specified system (alias) to which the business object of the toolbar iView is assigned as the following:

- From the personalize page go to **User Profile**.
- Select **User Mapping for System Access**.

- Select the **System Alias**.

- At this time the **Modify** button will be enabled, click it.
- Insert your credentials.
- Save the changes, click the **Save** button.

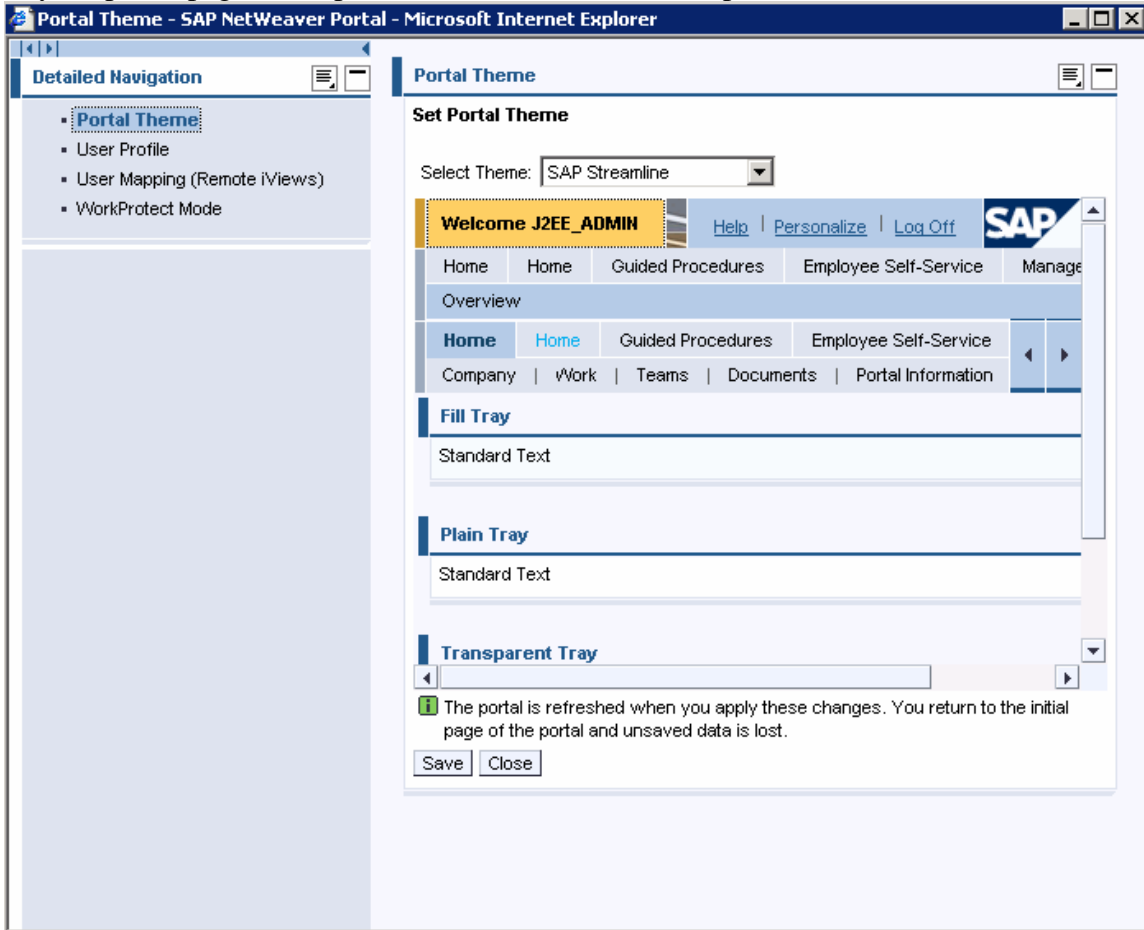

And now your credentials are saved on the portal. When you access the toolbar next time, your credentials will be read from the portal and passed to the web service without requesting you for a login form.

Personalizing your toolbar

The toolbar is designed in a way that will be suitable for your portal page. For example, when you change the layout of your portal, the toolbar will be changed according to your changes.

You can personalize your page by clicking on the personalize link that appears on the top of your portal pages. The personalization window will open.

For example, if you change the theme and save the changes and then close the window, you will see the changes' effects on your portal page as well as on your Toolbar as shown in the figures:
